Broadband Optical Access Networks and Fiber-to-the-Home

Book Description. Broadband optical access network is an ideal solution to alleviate the first/last mile bottleneck of current Internet infrastructures. Richly illustrated throughout to help clarify important topics, Broadband Optical Access Networks covers the architectures, protocols enabling technologies of broadband optical access networks, and all current and future competing technologies for access networks.

Description This training aims to focus on Optical Access Networks, specifically Fiber to the X (FTTX) technologies and different key topics related to Optical Access Networks. By the end of this training, the participants should be able to: ? Understand Passive Optical Network (PON) architecture and its possible implementation. ?

This shift is encouraging telcos and ISPs across the globe to upgrade their networks using optical fiber (FTTx). While optical fiber is the preferred option for providing broadband services, high speed Wireless Access (FWA) based on 4G/LTE and pre-5G technologies have also emerged as suitable alternatives in areas where fiber laying is difficult due to right-of-way issues or terrain limitations.

coaxial cable, optical fiber, radio or twisted pair. In the context of Internet access, broadband is used to mean any high-speed Internet access that is always on and faster than dial-up access over traditional analog or ISDN PSTN services.
