Environmental Policy Law: Problems, Cases and Readings (University Casebook Series) [Holly D. Doremus, Albert C. Lin, Ronald H. Rosenberg, Thomas J. Schoenbaum] on Amazon.com. \*FREE\* shipping on qualifying offers. Environmental Policy Law: Problems, Cases and Readings (University Casebook Series)

This casebook takes a very broad view of environmental law, encompassing the regulation of private and public land use and protection of wildlife as well as pollution control and remediation. It provides sufficient breadth for any introductory environmental or natural resources law course. It also strikes a balance by focusing in detail on those portions of the statutes covered that raise particularly interesting or important conceptual issues. Throughout, it highlights perpetual controversies such as the nature of human relationships to nature and the appropriate extent of individual control over natural resource use. The Fifth Edition includes problems that help students develop and test their facility with the materials in the text and the concepts underlying those materials. The new edition will also have new chapters on international environmental law issues and on enforcement issues.

This chapter for the Handbook of Law and Economics provides an economic perspective of environmental law and policy. We examine the ends of environmental policy, that is, the setting of goals and targets, beginning with normative issues, notably the Kaldor-Hicks criterion and the related method of assessment known as benefit-cost analysis. We examine this analytical method in detail, including its theoretical foundations and empirical methods of estimation of compliance costs and environmental benefits. We review critiques of benefit-cost analysis, and examine alternative approaches to analyzing the goals of environmental policies. We examine the means of environmental policy, that is, the choice of specific policy instruments, beginning with an examination of potential criteria for assessing alternative instruments, with particular focus on cost-effectiveness. The theoretical foundations and experiential highlights of individual instruments are reviewed, including conventional, command-and-control mechanisms, market-based instruments, and liability rules. Three cross-cutting issues receive attention: uncertainty; technological change; and distributional considerations. We identify normative lessons in regard to design, implementation, and the identification of new applications, and we examine positive issues: the historical dominance of command-and-control; the prevalence in new proposals of tradeable permits allocated without charge; and the relatively recent increase in attention given to market-based instruments. We also examine the question of how environmental responsibility is and should be allocated among the various levels of government. We provide a positive review of the responsibilities of Federal, state, and local levels of government in the environmental realm, plus a normative assessment of this allocation of regulatory responsibility. We focus on three arguments that have been made for Federal environmental regulation: competition among political jurisdictions and the race to the bottom; transboundary environmental problems; and public choice and systematic bias.

This casebook emphasizes both the basic building blocks of environmental policy and the structure and details of the federal environmental statutes. It focuses the attention of students on how the tradeoffs between environmental goals and other social goals are resolved in the different and difficult contexts. The book pays especially close attention to the political context in which regulation takes place, looking at the impact of our federal system of government, the role of administrative agencies in the regulatory process, and the impact of interest groups. The book makes a concerted effort to introduce comparative perspectives, looking, where appropriate, at state programs, and comparable regulatory regimes in the European Union and the international community. It also focuses on the current efforts to regulate greenhouse gases under the Clean Air Act. The casebook has substantial introductions and extensive notes and questions designed to guide the classroom discussion. In the chapters focusing on environmental policy, it also includes some substantial excerpts from academic articles. In the other chapters, the principal academic perspectives are introduced in the notes and questions.

This Document Supplement for International Environmental Law and Policy: Cases, Materials, and Problems, Third Edition, includes the text of documents referenced in the coursebook. Coverage includes documents in the following areas: foundation documents; responsibility and liability; freshwater resources; the marine environment; the polar regions; atmosphere; biological diversity; and trade, business, and the environment.

This volume in the Interdisciplinary Readers in Law series is a collection of 40 readings by lawyers, economists, environmentalists, and legal scholars, which introduce students to the major theoretical approaches in the field. The selections have been edited to facilitate accessibility, and each chapter includes an introduction highlighting the most important contributions of the readings. The chapters end with an extensive set of notes and questions, designed both to provide a deeper understanding of the readings as well as to introduce and critique a broader set of perspectives. This book can be used as a companion volume to the case materials used in a survey course on environmental law, as a textbook for law school seminars on environmental law and policy, and for undergraduate and graduate seminars on environmental policy in a variety of disciplines, including government, public policy, forestry, and resource management. This volume is part of the Interdisciplinary Readers in Law series (Roberta Romano, General Editor). Designed as a collection of supplementary texts for law school courses, the series collects important essays from leading lawyers, economists, political scientists, philosophers, historians, and legal scholars, reflecting the broad range of scholarship that informs contemporary law. Other volumes in the series include Foundations of Corporate Law (Roberta Romano, Editor) Foundations of Administrative Law (Peter Schuck, Editor), Foundations of Contract Law (Richard Craswell and Alan Schwartz, Editors), Foundations of Tort Law (Saul Levmore, Editor), and Foundations of Employment Discrimination Law (John J. Donohue III, Editor).

Environmental Protection: Law and Policy welcomes Emily Hammond, a professor of law at George Washington University, whose expertise includes administrative law, environmental law, and energy law, and whose scholarship appears in a number of law journals and books, including Energy, Economics, and the Environment. Environmental Protection: Law and Policy, now in its Seventh Edition, features: A complete introduction to the history of environmental protection, laws and regulations, regulatory design strategies, and policy objectives Analysis of constitutional federalism and related policy questions concerning the design and implementation of environmental protection programs An international and interdisciplinary approach that incorporates science, economics, and ethics Coverage of the major federal pollution control laws--the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, CERCLA, and more A chapter on climate change that covers important scientific, policy, and program design questions Two chapters on natural resource management issues, focusing on the National Environmental Policy Act and the Endangered Species Act, but also including national forest management Landmark and cutting-edge cases with explanatory text, notes and questions Charts and graphics, plus numerous exercises and problems
