Just like Mark Twain's Tom Sawyer and Huckleberry Finn, this novel about life "back in the day" for an imaginative farm boy is an endearing, timeless coming-of-age adventure that is sure to become a classic.Through Teddy's eyes and heart, the idyllic farm life viewed in magazines and on TV appears to be out of reach. For Teddy, life looks so much better over the fence or down the road. He experiences his young life filled with disappointments, bullies, broken dreams, fear, strained relationships, and even death. In spite of it all, Teddy never quits believing in his dream of the way life can be. What keeps his dream alive? Why does Teddy run in the deep darkness of a cow pasture? What causes his cascade of confusing emotions? How do the eyes of Teddy's heart enable him to come through a transformation?Readers, young and older, will find some of themselves in Teddy's story-in his everyday struggles, wonderings, and moments of joy. One only has to read with the eyes of the heart and have the courage and hope to become a more complete self. In the transformation, there is always a blessing.

The king of beautiful pub food has collected all of his best ideas into this proper cookbook, ready to warm the world on a grey day and restore the nation's good mood. Tom Kerridge's idea of food heaven isn't fussy gastronomy; it's proper 'man food' with Michelin star magic, including breakfasts that keep you smiling for the whole day, indulgent long lunches, teatime temptations, seasonal snacks and heart-warming suppers. In this cookbook Tom proves that everyone can make proper pub food, and the only place he wants to see a foam is on the head of a pint of beer! Over 100 recipes reveal his secrets for making real food truly amazing, including perfected dishes from his childhood and special treats he serves at his own one-of-a-kind pub. These recipes are simply the best version you'll ever have of the dishes everyone loves the most. This fantastic feel-good cookbook is the official accompaniment to Tom Kerridge's Proper Pub Food TV show, featuring all the recipes from the six episodes and many, many more. With excellent photography from Cristian Barnett.

Human-Machine Shared Contexts considers the foundations, metrics, and applications of human-machine systems. Editors and authors debate whether machines, humans, and systems should speak only to each other, only to humans, or to both and how. The book establishes the meaning and operation of ?shared contexts between machines and humans; it also explores how human-machine systems affect targeted audiences (researchers, machines, robots, users) and society, as well as future ecosystems composed of humans and machines. This book explores how user interventions may improve the context for autonomous machines operating in unfamiliar environments or when experiencing unanticipated events; how autonomous machines can be taught to explain contexts by reasoning, inferences, or causality, and decisions to humans relying on intuition; and for mutual context, how these machines may interdependently affect human awareness, teams and society, and how these "machines" may be affected in turn. In short, can context be mutually constructed and shared between machines and humans? The editors are interested in whether shared context follows when machines begin to think, or, like humans, develop subjective states that allow them to monitor and report on their interpretations of reality, forcing scientists to rethink the general model of human social behavior. If dependence on machine learning continues or grows, the public will also be interested in what happens to context shared by users, teams of humans and machines, or society when these machines malfunction. As scientists and engineers "think through this change in human terms," the ultimate goal is for AI to advance the performance of autonomous machines and teams of humans and machines for the betterment of society wherever these machines interact with humans or other machines. This book will be essential reading for professional, industrial, and military computer scientists and engineers; machine learning (ML) and artificial intelligence (AI) scientists and engineers, especially those engaged in research on autonomy, computational context, and human-machine shared contexts; advanced robotics scientists and engineers; scientists working with or interested in data issues for autonomous systems such as with the use of scarce data for training and operations with and without user interventions; social psychologists, scientists and physical research scientists pursuing models of shared context; modelers of the internet of things (IOT); systems of systems scientists and engineers and economists; scientists and engineers working with agent-based models (ABMs); policy specialists concerned with the impact of AI and ML on society and civilization; network scientists and engineers; applied mathematicians (e.g., holon theory, information theory); computational linguists; and blockchain scientists and engineers. Discusses the foundations, metrics, and applications of human-machine systems Considers advances and challenges in the performance of autonomous machines and teams of humans Debates theoretical human-machine ecosystem models and what happens when machines malfunction

Voice over IP (VoIP) hit the headlines during the mid-1990's amid claims concerning its impact upon existing Switched Circuit telephony services. Whilst VoIP has clearly provided a focus for much debate within the telecommunications industry, there has been a clear gulf between hype and reality. This book examines VoIP as a technology and its consideration within the industry, the motivations for VoIP networks, a review of the status of the major components of a VoIP network and their development, and both current and emerging applications. This makes for essential reading for those with a technical or business interest in this rapidly developing area.

Engineering Design with SolidWorks 2013 and Video Instruction is written to assist students, designers, engineers and professionals. The book provides a solid foundation in SolidWorks by utilizing projects with step-by-step instructions for the beginner to intermediate SolidWorks user. Explore the user interface, CommandManager, menus, toolbars and modeling techniques to create parts, assemblies and drawings in an engineering environment. Follow the step-by-step instructions and develop multiple parts and assemblies that combine machined, plastic and sheet metal components. Formulate the skills to create, modify and edit sketches and solid features. Learn the techniques to reuse features, parts and assemblies through symmetry, patterns, copied components, design tables, Bills of Materials, Custom Properties and Configurations. Address various SolidWorks analysis tools: SimulationXpress, Sustainability / SustainabilityXpress and DFMXpress and Intelligent Modeling techniques. Learn by doing, not just by reading! Desired outcomes and usage competencies are listed for each project. Know your objective up front. Follow the steps in Project 1 - 8 to achieve the design goals. Work between multiple documents, features, commands and custom properties that represent how engineers and designers utilize SolidWorks in industry. Review individual features, commands and tools with the enclosed Video Instruction DVD. The projects contain exercises. The exercises analyze and examine usage competencies. Collaborate with leading industry suppliers such as SMC Corporation of America, Boston Gear and 80/20 Inc. Collaborative information translates into numerous formats such as paper drawings, electronic files, rendered images and animations. On-line intelligent catalogs guide designers to the product that meets both their geometric requirements and performance functionality. The authors developed the industry scenarios by combining their own industry experience with the knowledge of engineers, department managers, vendors and manufacturers. These professionals are directly involved with SolidWorks every day. Their responsibilities go far beyond the creation of just a 3D model. The book is design to compliment the SolidWorks Tutorials contained in SolidWorks 2013. There are over 2.5 hours of video instructions on the enclosed DVD.

Make your next quilt come alive with color! Whether it's a Bostom Commons, Trip Around the World, Nine Patch, or Irish Chain, best-selling author Blanche Young and her daughter Dalene Young Stone show you how to give your favorite traditional quilt a new twist through the creative use of fabric. This delightful book has over 26 projects showing new streamlined construction techniques utilizing the rotary cutter and your sewing machine. The older methods are still valid, but the new techniques presented in this book were developed to use with the tools available to us today.

Modern Architecture in Latin America: Art, Technology, and Utopia is an introductory text on the issues, polemics, and works that represent the complex processes of political, economic, and cultural modernization in the twentieth century. The number and types of projects varied greatly from country to country, but, as a whole, the region produced a significant body of architecture that has never before been presented in a single volume in any language. Modern Architecture in Latin America is the first comprehensive history of this important production. Designed as a survey and focused on key examples/paradigms arranged chronologically from 1903 to 2003, this volume covers a myriad of countries; historical, social, and political conditions; and projects/developments that range from small houses to urban plans to architectural movements. The book is structured so that it can be read in a variety of ways?as a historically developed narrative of modern architecture in Latin America, as a country-specific chronology, or as a treatment of traditions centered on issues of art, technology, or utopia. This structure allows readers to see the development of multiple and parallel branches/historical strands of architecture and, at times, their interconnections across countries. The authors provide a critical evaluation of the movements presented in relationship to their overall goals and architectural transformations.

Want to conquer your e-mail inbox once and for all? Need help getting organized and staying focused? Start reading! Millions of people already benefit from the innovative, time-saving tips that Steve Robbins dispenses each week in his #1 ranked Get-It-Done Guy podcast. Now he's come up with a 9-step plan to transform even the most overwhelmed into an overachiever. You will learn to: Beat procrastination by speed dating

your tasks: You'll face anything if it's just for three minutes; schedule small, finite periods of time for those tasks that seem too overwhelming to get started on. Give your technology a performance review: Our smart phones, PDAs, and computers often make less work in one area while making much more work in others. Review your technology to make sure it's delivering on its promise. Cut out the small talk: Small talk builds superficial relationships, which is a grand waste of time. Ask better questions to make instant connections that'll benefit you for years to come. Written in the uniquely humorous style Stever is known for, Get-It-Done Guy's 9 Steps to Work Less and Do More will help you break the bad habits slowing you down and holding you back. Work less and do more—your free time is waiting!

The newly expanded "Learn to Listen, Listen to Learn" series prepares students for the rigors of academic classwork, helping them acquire the listening-comprehension and note-taking skills necessary for success. This two-book series offers students valuable tips for getting the most from college lectures, including note-taking skills, organization of information, recognition of language cues, and the acquisition of vocabulary. Students are shown how a typical lecture is organized, using extensive excerpts and transcripts from authentic lectures on high-interest topics from a wide range of academic discipline. Features: Includes new and updated material, including expanded vocabulary, extension, and post-lecture activities to encourage students to discuss, research, and write about ideas raised in the lectures. Teaches students how to recognize lecture organization, and how to evaluate and predict information. Focuses on the acquisition of vocabulary, especially from the Academic Word List, and on the recognition of language cues. Prepares students for academic testing with TOEFL-style test questions throughout the text. Audio CDs are also available for this text. Click on the links to the left of this page to purchase the Audio CDs. See also "Learn to Listen, Listen to Learn 1."
