C programming has two operators increment ++ and decrement --to change the value of an operand (constant or variable) by 1. Increment ++ increases the value by 1 whereas decrement --decreases the value by 1. These two operators are unary operators, meaning they only operate on a single operand. Example 2: Increment and Decrement Operators

= Simple assignment operator. Assigns values from right side operands to left side operand C = A + B will assign the value of A + B to C += Add AND assignment operator. It adds the right operand to the left operand and assign the result to the left operand. C += A is equivalent to C = C + A ...

Assignment Operators in C - Tutorialspoint

An operator is a symbol that tells the compiler to perform specific mathematical or logical functions. C language is rich in built-in operators and provides the following types of operators - == Checks if the values of two operands are equal or not. If yes, then the condition becomes true. (A == B ...

C - Operators - Tutorialspoint

This is a list of operators in the C and C++ programming languages. All the operators listed exist in C++; the fourth column "Included in C", states whether an operator is also present in C. Note that C does not support operator overloading.. When not overloaded, for the operators &&, ||, and , (the comma operator), there is a sequence point after the evaluation of the first operand.

Operators in C and C++ - Wikipedia

In C, a pointer might very often point to an instance of a structure; in C++, a pointer might often point to an object. It is so common to use pointers to structures and objects, the "arrow" operator (->) was added to the language to save a few keystrokes for this pointer-dereference-and-access operation.
