Studies in Military Geography and Geology eBook: Douglas R ...

This paper is about the distinctive contributions which contemporary military geography might make to the wider critical military studies project. The paper notes the relative absence of the study of military topics across Anglophone human geography in the second half of the twentieth century, and the resurgence of interest in the spatialities of militarism and military activities over the past decade or so in tandem with the emergence of critical geography.

Geography, military geography, and critical military studies

Studies in Military Geography and Geology expands a series of recent publications originating from conferences and symposia on military geology that began at the Geological Society of America annual meeting in Seattle, WA in 1994.

The paper concludes with a reflexive commentary on what critical military studies might take from ongoing debates in human geography about the necessity of engagement and co-inquiry with research...

Geography, Military Geography, and Critical Military Studies

At the tactical level, military geography translates to the near considerations of terrain and vegetation, weather, and the cultural landscape. These military aspects of terrain are commonly known as observation and fields of fire, cover and concealment, obstacles, key terrain, and lastly, avenues of approach and mobility corridors.

military geography

Military geography is a sub-field of geography that is used by the military, as well as academics and politicians, to understand the geopolitical sphere through the military lens. To accomplish these ends, military geographers consider topics from geopolitics to physical locations' influences on military operations and the cultural and economic impacts of a military presence. On a tactical level, a military

Military geography is a sub-field of geography that is used by, not only the military, but also academics and politicians to understand the geopolitical sphere through the militaristic lens. Following the Second World War, Military Geography has become the "application of geographic tools...

Military geography | Military Wiki | Fandom

Introduction Military geography involves the application of geographic information, tools, and technologies to military problems. In essence, military operations involve time, space, and the nature of what exists within the confines of that time and space—this is an inherently geographic perspective.

Studies in Military Geography and Geology eBook: Caldwell ...

Military geography encompasses much more than simple protestations to take the high ground. Military geography studies the obvious, the geography of theatres of war, but also the additional characteristics of politics, economics, and other natural features of locations of likely conflict (the political "landscape", for example).

A selection of papers on a broad range of military topics ranging from the strategic perspective, through analyses of historical battles at the operational and tactical levels, to the use of advanced technologies applied to present-day military problems.

An examination of geography's critical effects on battles throughout the ages

This book of contributed chapters by subject matter expertly provides an overview and analysis of salient contemporary and historical military subjects from the military geographer's perspective. Factors of geography have had a compelling influence on battles and campaigns throughout history; however, geography and military affairs have gained heightened attention during the past two decades, and military geography is the discipline best situated to explain them. Hence, the premise of this book and its contents are founded on the principle that geographical knowledge of space, place, people, and scale provide essential insights into contemporary security issues and promotes the idea that such insight is critical to understanding and managing significant military problems at local, regional, and global scales.

"Eighteen chapters address the complex yet critical aspects of the role of geosciences in military undertakings. The chapters cover a wide range of expertise drawn from the broad area of geology,

geomorphology, geography, geophysics, engineering geology, hydrogeology, cartography, environmental science, remote sensing, soil science, geoinformatics, and related disciplines that reflect the multidisciplinary nature of military geology"--

A RAND study analyzed Chinese and U.S. military capabilities in two scenarios (Taiwan and the Spratly Islands) from 1996 to 2017, finding that trends in most, but not all, areas run strongly against the United States. While U.S. aggregate power remains greater than China's, distance and geography affect outcomes. China is capable of challenging U.S. military dominance on its immediate periphery—and its reach is likely to grow in the years ahead.

Down the ages, war epidemics have decimated the fighting strength of armies, caused the suspension and cancellation of military operations, and have brought havoc to the civil populations of belligerent and non-belligerent states alike. This book examines the historical occurrence and geographical spread of infectious diseases in association with past wars. It addresses an intrinsically geographical question: how are the spatial dynamics of epidemics influenced by military operations and the directives of war? The term historical geography in the title indicates the authors' primary concern with qualitative analyses of archival source materials over a 150-year time period from 1850, and this is combined with quantitative analyses less frequently associated with historical studies. Written from the viewpoints of historical geography, epidemiology, and spatial analysis, this book examines in four parts the historical occurrence and geographical spread of infectious diseases in association with wars. Part I: War and Disease, surveys war-disease associations from early times to 1850. Part II: Temporal Trends studies time trends since 1850. Part III: A Regional Pattern of War Epidemics, examines grand themes in the war-disease complex. Part IV: Prospects, considers a series of war-related issues of epidemiological significance in the twenty-first century.

Geopolitical conditions influence all strategic behaviour - even when cooperation among different kinds of military power is expected as the norm, action has to be planned and executed in specific physical environments. The geographical world cannot be avoided, and it happens to be 'organized' into land, sea, air and space - and possibly the electromagnetic spectrum including 'cyberspace'. Although the meaning of geography for strategy is a perpetual historical theme, explicit theory on the subject is only one hundred years old. Ideas about the implication of geographical, especially spatial, relationships for political power - which is to say 'geopolitics'- flourished early in the twentieth century. Divided into theory and practice sections, this volume covers the big names such as Mackinder, Mahan and Haushofer, as well as looking back at the vital influence of weather and geography on naval power in the long age of sail (sixteenth to nineteenth centuries). It also looks forward to the consequences of the revival of geopolitics in post-Soviet Russia and the new space-based field of "astropolitics".

A study of the technological limitations of maritime traffic in the Mediterranean, seen in conjunction with the geographical conditions within which it operated.

Defence against military attack has had a considerable geographical impact. Urban morphology frequently owes more to the defence function than to any other, whilst local, regional and national economies are often intricately dependent on defence expenditure. It is also clear that the social geography of cities, both recently and in the past, has been affected by the presence of the military. Despite its importance, defence as a major government function has not been the focus of geographical analysis in the same way as housing, transport, health or education. This volume redresses this imbalance by demonstrating the geographical importance of defence in these vital areas.
