the planning process to design an energy and resource efficient home that won't break the bank. Then, from the footings on up to the roof, author Thomas J. Elpel guides you through the nuts and bolts of construction for slipform stone masonry, tilt-up stone walls, log home construction, building with strawbales, making your own terra tile floors, windows and doors, solar water systems, masonry heaters, framing, plumbing, greywater, septic systems, swamp filters, concrete-fly ash countertops, painting and more. Living Homes was completely re-organized and revised for the new sixth edition, based on five additional years of building experience with low-cost, high efficiency construction methods. Get the latest ideas on how to build a high-performance house that will stand the test of time! The sixth edition includes fifteen pages of new material covering the latest stone masonry tips, plus revised and expanded tips and techniques throughout the book.

Have you ever dreamed of building or at least living in a beautiful stone house? For more than five years Stonefield Publishing's Stone House: A Guide to Self-Building with Slipforms has been the prime source for information on a unique method of stone masonry that affords everyone, regardless of their level of building experience, the opportunity to create walls and even homes of stone. "The technique has been around for a long time," says author Tomm Stanley, "but it's not that well known. Add to that the mystique that surrounds the traditional craft of stonemasonry and there's no wonder that stone houses are not all that common, even in areas where stone is abundant". The book has now been revised and is being re-released with two new chapters, digital enhancement to the original images and new photographs. Stonefield Publishing's Marketing Manager Brad Andersen notes, "We've received a lot of great feedback from readers over the years but one consistent issue was the image quality. We took those comments to heart and with technology that wasn't available to us back in 2003 have just brought the photos to life". Tomm says that writing the new chapters and preparing the revised edition for print allowed him to finally complete his original vision of the book. "One of the new chapters, called Reflections, could only have been written after the passage of time. It's about looking back and thinking about what could have been done differently, what worked very well and also speculating on potential targets for future alteration. It really finished the story for me and makes it more complete for readers." Stone House focuses on the story of Tomm Stanley's own experience of building his house with the slipform method. This book is certainly not your average "how-to" offering; it is more like a tapestry of information and entertainment interwoven with technical advice, diagrams and pictures, tales of the owner builder experience and as the title implies, plenty of guidance on how to build your own stone house using the slipform method of construction. It makes great reading for those that are on the way to becoming self-builders as well as the rest of us that dream of such adventures.
